

Computer Graphics exam project topics

Version 1.0, 10th May 2026.

The possible topics of the projects are listed below. You have the freedom to choose any of the ones listed below.

- **Haunted Castle Explorer**
Design a simplified 3D real-time exploration of a haunted castle. The user must be able to navigate through the rooms and interact with the environment such as, for example, open secret passages, pick up objects, light candles, or trigger hidden mechanisms.
- **Dungeon Tavern NPC**
Design a 3D tavern environment in which the user can approach and interact with one or more virtual characters (e.g., innkeeper, bard, merchant). The user navigates in first person and can trigger the interaction by getting close to a character and pressing a key.
- **Enchanted Forest Wanderer**
Design a simplified 3D real-time exploration of an enchanted forest. The user must be able to navigate through the environment and interact with it such as, for example, collect herbs, activate glowing plants, feed animals, or unlock hidden paths.
- **Modular School Classroom Planner**
Design an interactive 3D environment in which the user can build and arrange a classroom by placing modular elements (e.g., desks, chairs, blackboards, shelves) inside a predefined room layout. The user must be able to move, rotate, and delete elements using the keyboard and/or GUI.
- **Hospital Resource Mover**
Design a simplified 3D simulation of a hospital environment in which the user must relocate beds, equipment, and medical supplies from one room to another to meet changing ward requirements. The user navigates with first person view and interacts with objects using the keyboard and/or GUI.
- **Tabletop Dice RPG Arena**
Design a 3D tabletop environment where the user can roll dice, move tokens on a grid, and interact with simple game elements placed on a virtual table. The player can rotate the camera around the table and zoom to inspect the board.
- **Animal Herding Simulator**
Design a third-person simulator inspired by farming management games such as Stardew Valley or Hay Day, in which the user controls a character that must herd a group of animals toward marked areas in a 3D environment, completing each task within a time limit. Animal movements do not need to be animated.
- **Vehicle Simulator**
Design a third-person simulator in which the user controls a vehicle (car, truck, airplane, drone, helicopter) and must perform precise movement to reach marked pads in a 3D environment.
