

# Assets

The asset folder is here:

[https://polimi365-my.sharepoint.com/:f/g/personal/10339551\\_polimi\\_it/IgAJB4Usb8lXT4RWHf6C6SsAAeuWcrrkG-cCKd-nixzTYlc?e=aUkwXB](https://polimi365-my.sharepoint.com/:f/g/personal/10339551_polimi_it/IgAJB4Usb8lXT4RWHf6C6SsAAeuWcrrkG-cCKd-nixzTYlc?e=aUkwXB)

In this shared folder, you will find several assets: the name of the directory will specify which type of object you might find inside.

For each object, a PNG image with a thumbnail of the asset, is present: please use it, together with the name of the file, to find an object that might fulfill your needs.

Objects are saved in a proprietary format called. MGCG, and they can be used ONLY for the Computer Graphics final project. You do not have the license to use these assets in other projects! They have been mildly encrypted and encoded, just to discourage you from using them elsewhere. Since you have the source code you might very easily convert the assets back into a format that can be used in other applications with a limited effort: however, I also expect that you value licensing, and you will not do it!

Most of the assets have been bought from CGTrader.com, and most of them are at very affordable prices: if you like them and you would like to use them in another project, please consider purchasing those models and support their artists.

All assets inside a folder share the same texture, contained in folder Textures. The assets in folder XXX they use the texture `_Textures/Textures_XXX.png`: for example, assets `City/Apartment_1.mgcg` and `City/Box_001.mgcg`, in folder `City/`, use the same texture `Textures/Textures_City.png`.

This shared folder also contains the subdirectory `_Code/` where you can find the skeleton of a project (`skeleton2026.zip`) with the latest version of the `Starter.hpp` library, which includes also the methods for reading the MGCG model files. **Please note that you MUST use this skeleton for your project.** If you already have started the development of your project using the `Starter.hpp` contained in some examples, please download this skeleton, and insert your assets and sources there: this version should be compatible with the previous one, and this process should not create any problems. **You are not allowed to change `Starter.hpp` or any of the files in the `include` folder from this skeleton.**

The reason for this lack of flexibility is the following. At the end of your presentation at the exam, you will be required to upload the source code of your project. We will compile and test your project offline: however, the project will be compiled with a “professor” version of `Starter.hpp`, which beside running your application, will also collect some information about your implementation that will be used in determining your grade. For this step to work smoothly, the starting point of your project must be fixed. We hope you will understand these requirements and comply with them.
